

Class activity 5

In this class activity join groups of 4 to 5 students and attempt to identify all possible data types to be used for all systems

After 20 minutes discuss with other groups what you identified.

1. For a Student system for the University provide all possible data types to capture the details and all necessary academic information.
2. You must design a movie system similar to Netflix that captures the necessary information for users to use the system.
3. You must design a flight booking system that captures the details of a flight.
